Maximise uptime safely, with control and without interruption

Onspot helps drivers maintain control when road conditions change rapidly and reduces the risk of downtime caused by snow and ice. The result is safer transport operations, improved mobility and greater fleet availability in demanding winter conditions.

Instant traction

Without stopping, for continuous operation

Minimal maintenance

Easy to install, use and rely on

Safe and reliable

In demanding or changing weather conditions

Vehicle-Specific

Mounting brackets for a wide range of heavy vehicles.

How Onspot automatic snow chains work

1. Onspot is easily activated directly from the cab.
2. The chain wheel is lowered against the drive wheel and begins to rotate. The chains are thrown beneath the tyre.
3. Provides instant traction and helps the vehicle maintain mobility in winter conditions.
4. When road conditions improve, the system can be easily disengaged while driving at the touch of a button.
